ADM Associates, Inc. is a professional service corporation providing research and consulting services in applied engineering and economics to clients in business, industry and government. ADM has both analytical and practical capabilities for analysis of energy use by households and by commercial and industrial firms. We have strong capabilities in analyzing commercial and residential end-use loads, in assessing commercial and residential appliance technologies, in developing and evaluating energy-efficiency programs, and in developing forecasts of energy use by end-use. Moreover, our analytical capabilities are complemented by our strong, hands-on capability in conducting large-scale projects to collect energy-related data on households and on commercial and industrial firms.

Agland Investment Services, Inc. has over 30 years of experience in the development of integrated agricultural and industrial businesses worldwide. In the energy field, Agland is applying its agricultural expertise to develop projects that link agricultural production with biofuels projects to reduce uncertainties in feedstock supply, increase long-term price stability, and streamline feedstock logistics. This integrated approach creates a low-cost supply program that, when combined with dual-output manufacturing (such as sugar and ethanol, or cooking oil and biodiesel), provides consistent high returns in ever-changing commodity markets. To best serve its clients, Agland Investment Services has joined forces with leading experts in agricultural and food processing industries to develop integrated agricultural production and biofuels processing/marketing facilities.

Agland has successfully completed more than 150 agricultural development, alternative energy, natural resource, food-processing, training, and agribusiness investment projects in California and in over 35 countries. Projects range from short-term studies to long-term management, advisory, and training assignments coupled with engineering design and implementation. Agland's partners have extensive experience designing and implementing agribusiness production and processing facilities worldwide. Please visit our website, www.aglandinvest.com, for more information on current projects worldwide.

Allied Environmental Technologies, Inc. is a multi-discipline design and consulting engineering firm. It was founded to meet industry needs for solving challenging emissions and applied energy development problems. The company's objective is to provide a variety of professional services, including custom engineering, specialty systems design, manufacturing and implementation, and support to industry in emissions control, heat and mass transfer, waste management and applied energy systems, with a focus on applied combustion systems and air pollution control.

The company is also an engineering consulting services provider to the utility and industrial users, specializing in contract research and development, the application of computational fluid dynamics technology and other modeling techniques to solve problems related to gas/solid flows, combustion and heat transfer in areas including coal, ash and other solid materials handling, transfer and distribution.

American PERMALIGHT, Inc. supplies non-electrical, non-radioactive, energy-efficient photoluminescent EXIT signs & Exit Path Markings. Floor proximity egress path markings (safety signs, glow paints, anti-skid floor markers, warning chain, bumper guards, etc.) absorb light, store the energy and emit a bright yellowish luminance for 35+ hours in the dark. PERMALIGHT® IBC- & NFPA code compliant EXIT signs are explosion-proof and suited for High-location and Floor Proximity Installation. Many electric utility companies provide Energy-efficiency Rebates for photoluminescent EXIT sign use. EnergyStar. LEED qualifier.

ARCHER was formed in 1987 as a geologic consulting company focused on production reservoir characteristics, including detailed core description, and reservoir modeling. Secondary work consisted of property evaluation in the western United States. From 1987 to the end of 1991 Archer also developed and sold prospects in the onshore basins of California. Archer's prospect generation was focused in the San Joaquin and Sacramento basins of California.

On April 28, 1992, ARCHER EXPLORATION was incorporated as ARCHER EXPLORATION, INC. in the state of Nevada as an oil and gas operating company. From April 1992 through January 1998 Archer was a California DOGGR operator. During that time span Archer had leased and paid rentals on leases containing over 11,000 acres within the San Joaquin and Sacramento Basin. As an operator it drilled five exploratory wells and operated in the LA Basin.

In 1998, Archer changed its focus in from drilling and operations, to the development and sale of exploratory plays. Additionally, Archer acquired non operated working interest in gas production in the Sacramento Basin and working interest in exploratory gas plays throughout California. To present, Archer has participated in 26 outside operated exploratory wells five of which where drilled on prospects developed by Archer. The plays developed by Archer have been operated by Longbow, LLC, Archer's strategic partner in California.

Archer, using its? exploration methods, developed the North Franklin Prospect that was drilled in May 2004 as a new field discovery. The discovery is potentially one of California's best wells discovered in the last ten years.

Cascade Pump Company manufactures engineered high capacity vertical pumps and is the largest exclusive producer of Axial Flow and Mixed Flow pumping equipment in the world. Cascade is a member of Hydraulic Institute. Cascade Pumps have specific speeds over 4000. Flow ranges exceed 150,000 US GPM (10 M³/S) with operating heads over 60 feet (18M³/S) per stage. Besides vertical, configurations include horizontal, slant mount, can or barrel, hydro turbine and reverse pumping. These pump markets include municipal applications for water, waste treatment, storm water and utilities, industrial, irrigation, marine, amusement parks and aesthetic water features.

The Center for Resource Solutions (CRS) creates market and policy solutions to advance sustainable energy. Our leadership through collaboration and environmental innovation builds policies and consumer-protection mechanisms in renewable energy, greenhouse gas reductions, and energy efficiency that foster healthy and sustained growth in national and international markets. We also administer the Green-e certification programs for renewable energy and carbon offsets, and work with large corporate buyers to promote their use of renewable energy.

MPI?s mission is to supply the world with clean, abundant, and inexpensive electricity.

The company is developing Self-Powered SystemsTM. Based upon breakthrough discoveries in MPI?s labs, Self-Powered Systems are being designed that operate continuously, without fuel, extracting electricity from the interaction of magnetic fields. They will create no pollution. The cost of generated electricity is estimated to be less than 1 cent/Kwh, significantly less than any competing form of power generation today or in the foreseeable future.

Self-Powered Systems will be scaled to a wide range of applications. They appear suitable for the relatively small power needs of consumer devices up through the massive needs of power generation plants.

The abundant, renewable, ubiquitous, Zero Point Field is the source of the energy converted by Self-Powered Systems into electricity.

We have over 20 years managing energy-related development, M & A, financing and permitting. The Company is responsible for:

- >Managing and coordinating teams of technical, engineering, environmental, finance, legal, tax and accounting professionals.
- >Assessing the commercial feasibility of a wide variety of technologies and projects.
- >The analysis, development and commercialization of new projects and commercial ventures.
- >Developing, and managing required political support at Federal, State and local levels.
- >Drafting and negotiating business and contract terms for acquisitions, financing, joint ventures, energy sales and other business relations.
- >Advising on feasibility, marketing, contract and other issues.

We have managed M&A transactions valued at over \$500 million, and arranged for \$100s of millions in structured, on and off balance sheet, and venture capital financing, credit support and enhancement, and early stage investment.

We have extensive international experience in Asia, Latin America and Australia.

Consulting Petroleum Engineering Firm specializing in drilling, completion and workover operations and all related needs.

DRILTEK is an established California corporation specializing in engineering, planning and supervision of oil and gas wellsite operations. DRILTEK's position in the industry is unique: the company's principals are engineers who have extensive experience in wellsite supervision. This enables the company to offer its clients the singular combination of solid engineering and operational expertise. Headquartered in Bakersfield, California, DRILTEK provides services both onshore and offshore, locally and internationally, to major oil companies as well as independent oil and gas operators.

DRILTEK's experienced personnel have planned and supervised the drilling and completion of hundreds of wells, including more than 150 deep wells below 12,000' and HPHT wells as deep as 20,000'.. Acting for its clients as an "ad hoc" engineering and operations department, DRILTEK coordinates all facets of the planning and execution of drilling and completing oil and gas wells. DRILTEK also offers a unique turnkey drilling option that has been successfully utilized by major and independent oil companies. High standards of professionalism, combined with DRILTEK's risk management philosophy and background of hands-on experience, serve to provide cost-effective solutions to the specific needs and situations of DRILTEK's clients. By dealing only with honesty and integrity, DRILTEK has developed the trust of its clients and the respect of the service industry.

DRILTEK provides a cost-effective means of meeting its clients' needs through a combination of solid engineering and operations expertise, risk management and professional service.

For over 30 years, Dudek professionals have been working throughout California to meet the state's renewable energy goals and improve transmission and substation infrastructure. We specialize in environmental analysis and mitigation to help clients secure regulatory compliance for energy projects. Our project managers help through the entitlement process and ultimately to a successful project with their planning, permitting and construction experience; in-depth regulatory knowledge; and regulatory agency relationships. Our network of statewide experts know the local stakeholders and jurisdictional agencies throughout California. Dudek is currently processing over 4.2 gigawatts of renewable energy projects in California. Our approach to renewable energy projects includes: • Due Diligence • Site Constraints/Fatal Flaw Assessments • Visual Assessments • Biological Surveys • Technical Studies • Hydrology and Groundwater Assessment and Modeling • Water Supply Assessments • Wildfire Protection Planning • CEQA/NEPA Compliance • Environmental Permitting • Construction Compliance Monitoring • Habitat Restoration and Management • Grading and Access Road Design • Post-Construction Monitoring Whether expanding an existing transmission line or planning a new project, securing regulatory compliance in California for large-scale linear projects can be challenging. Dudek's full range of transmission services includes: • California Public Utilities Commission CPCN application support • CEQA/NEPA environmental documentation • Constructability/feasibility and alternative route reviews • GIS mapping spatial and sensitivity analysis of visual analysis and simulations • Biology, land use, noise, hydrology, traffic and air quality studies • Recreation and agriculture studies • Hazardous materials evaluation and mitigation • Right-of-way (ROW) management, maintenance and monitoring • Engineering evaluation of potential utility conflicts • Engineering and feasibility of trenchless techniques used in undergrounding transmission circuits • Regulatory permitting • Environmental mitigation monitoring, inspection and training • Project Web site/online access • Construction management

EIP Associates is a full-service planning and environmental firm with over 33 years serving public and private clients throughout California. Over the years, EIP Associates has matured and grown from a company focused primarily on environmental impact assessments to a broader role assisting clients with environmental planning, assessment, permitting, and regulatory compliance. EIP has completed over 6,000 successful environmental studies pursuant to the California Environmental Quality Act, the Clean Water Act, the Clean Air Act, the National Historic Preservation Act, and a host of other state and federal pieces of environmental legislation.

Green Export Enabler Program

(GEEP)(www.greenexport.org) is a Market Development Cooperator Program (MDCP) geared towards assisting California green/clean technology/renewable energy manufacturers. In October 2009, El Camino College Center for International Trade Development received a 3-year Market Development Cooperator Program (MDCP) award from the U.S. Department of Commerce's (USDOC) International Trade Administration (ITA) department. Our MDCP has been labeled GEEP. GEEP's mission is to assist California small and medium-sized companies in the green/clean technology, renewable energy, sustainable and green building industries to export their products to China. We have the support of USDOCs and USEACS in California and their green technology specialists based in China to assist California GEEP clients in search of distributors and buyers for their products. For financing, we are working in partnership with the Ex-Im Bank. El Camino College's CITD offers "one-stop" access to a full range of trade assistance services. Whether you are small or large, just starting or advanced, we can help you in every aspect of exporting and importing. Because we are State-funded, we can provide our services free of charge or at very low cost. We are one of 14 CITDs throughout California, all funded by the Chancellor's Office of the California Community Colleges. The statewide CITD network was created to promote the state's international trade and competitiveness, assist exporters and importers, and advance economic and job growth. Our full service trade assistance center is located in Hawthorne, California, just minutes south of Los Angeles Airport (LAX) and north of the ports of Los Angeles and Long Beach. Along with our sister CITDs in Glendora, Long Beach, Oxnard, Santa Ana, and Riverside we serve companies and individuals in Los Angeles County and surrounding areas. Our Partner Network The El Camino CITD works closely with federal, state, and local trade assistance partners to broaden our service base and better meet client needs. Through these partners and their trade assistance resources, we can help you obtain pre-export working capital, find qualified agents and distributors, take part in overseas trade promotional events; and handle all aspects of your export transaction.

Eldridge Products, Inc. (EPI) produces a variety of instrumentation for thermal gas mass flow measurement and control. Eldridge flowmeters and switches represent the culmination of nearly 20 years experience in thermal flow metering design and innovation. Our product line now features the Master-Touch? Family of thermal gas mass flowmeters. These microprocessor-based flowmeters provide the user with unrivaled power and flexibility in monitoring their gas flow. This technology is also incorporated into our Flow Averaging Tubes (patent pending) for large pipes and ducts, or problematic installations with limited straight run. The result is an accurate, economical, and reliable means of measuring the flow of gases in a wide variety of process applications.

PRINCIPAL SERVICES

A broad array of professional engineering, construction and equipment supply services are offered. We specialize in all aspects of energy or conservation related projects as well as CADD drafting. These services include:

Energy Conservation: A major portion of our Energy Conservation work has been tied to the California Energy Commission's mandated program called Title 24. Other states have also adopted very similar energy conservation standards. These regulations are known as the Building Energy Efficiency Standards. The State of California has required, by means of these published Standards, that all new and remodeled residential, commercial and industrial buildings meet a predetermined energy diet. Each project must submit to the local building department, as a part of the drawing submittal, a set of Title 24 Calculations which document the types of conservation methods used in the structure and, through a set of standard calculations, proves that the building only uses a predetermined amount of energy on an annual basis. We are licensed to perform these calculations using the State certified computer programs called Comply 24 and Trace.

Heating, Ventilating and Air Conditioning (HVAC), Plumbing, Lighting and Power Design: We have provided services in the area of commercial sized HVAC, Plumbing, Lighting and Power designs. Typical projects include offices, schools, restaurants, churches, small manufacturing facilities and retail stores.

Thermal Energy Storage: Off-Peak or Demand Side Load Management projects include ice or chilled water storage projects.

Cogeneration Development: The owner's principal background is in Cogeneration, therefore, a broad range of services are offered with regard to Cogeneration. We have had experience with over 75 projects in providing all aspects of Cogeneration development. We can offer feasibility studies, cost estimates, economic evaluations, equipment selection, mechanical and electrical design, emission control design, permitting, making financial arrangements and turnkey construction.

Building Energy Audits: Our company has provided over 25 building energy audits. These audits have

included all types of business such as office buildings, manufacturing companies, bio-medical facilities, restaurants, retail stores and malls, just to name a few. The audits result in a host of recommended measures like a change in electrical or gas rate, the installation of high efficiency lighting systems, insulation, high efficiency equipment and/or the installation of other equipment such as variable frequency drives. In addition, these audits sometimes go a step further and continue into feasibility studies for the installation of thermal energy storage systems, Cogeneration systems, electrical metering consolidation/ substation installation and engine-driven chiller installation.

Alternative Energy: We have a solid background in solar heating, photovoltaics, wind energy conversion, fuel cells and gas energy conversion (turboexpanders) projects.

Equipment Supply: ENERGISTICS, INC. will supply the most efficient, cost competitive equipment which suits the needs of the project at hand. We do not represent any one particular manufacturer which leaves us to select the right equipment for the job. We believe that this philosophy is best for our clients and eliminates ?forced fitting? equipment to a project.

ECS projects range from the simplest residential additions and commercial tenant improvements to custom home, multi-family housing, master planned communities, high-rise residential , office towers, commercial/industrial facilities multi-bulding and campus projects, and everything in between.

ECS can provide building energy code consulting and modeling tailored to your project and your needs such as envelope or shell, HVAC and fan power, lighting (indoor and outdoor), and water heating. ECS provides energy modeling services to the individual designers/developers for envelope, HVAC and lighting, and/or providing integrated energy modeling with envelope, HVAC and lighting together. ECS provides energy services primarily in California, but also where ever you might need it.

Energy Saving Systems is the Western Distributor and a Dealer for PROATEQ, a Polarized Refrigeration Oil Additive. A 20% electric power savings can be expected when PROATEQ is added to commercial, industrial, or institutional refrigeration systems, air conditioning, or heat pump applications. These savings are validated by many documented case studies which include FEMP (Federal Energy Management Program) and the Oak Ridge National Testing Laboratories. Investment payback is within one year of installation.

PROATEQ is safe and is compatible with all refrigerants and compressor oils.

EnergyConnect delivers industry-leading Smart Demand Response technologies and services to commercial, educational, municipal and industrial consumers enabling them to better manage their use of electricity in response to market prices or regional power shortages. The EnergyConnect technology platform provides a scalable, cost-effective, clean technology to enhance the grid's efficiency and reliability. The majority of facilities (such as college campuses, high-rise office buildings, shopping centers, manufacturing and industrial plants) already have the potential to realize economic benefit from the energy used in their facilities every day. Through EnergyConnect's tools, organizations connect their energy use to substantial cost savings and cash incentives.

Enerpro was incorporated in 1983 for the purpose of designing and manufacturing industrial power control circuit boards and assemblies. The initial product was a thyristor trigger board that could be adapted to many applications. This board became and industry standard, selling at ever increasing levels worldwide. Other boards and assemblies of increasing complexity have been developed for many applications including such as plating, welding, battery charging, steel production, oil and gas well drilling, uninterruptible power supplies, aircraft ground support and water purifications. Recent new products include a silicon switch for the GE 1.5 MW wind turbine and a 74 V rectifier for the GM/EMD SAD70Ace locomotive.

Engine, Fuel and Emissions Engineering, Inc. (EF&EE) is an engineering and consulting firm specializing in the measurement and control of air pollutant emissions from motor vehicles and other mobile sources, as well as conventional and alternative fuels and air quality issues worldwide. In a series of projects for the World Bank, EF&EE staff have literally "written the book" on strategies for controlling motor vehicle emissions in developing countries, and have helped to apply these strategies in cities from Bangkok to Buenos Aires. In the U.S., EF&EE and its professional staff have played important roles in the phaseout of leaded gasoline, development and reevaluation of present diesel emission control strategies, and development of technologies and emission regulations for natural gas vehicles.

The company has a substantial energy practice supporting U.S. and international companies in the areas of project design, financing, development, operation and maintenance. The company counsels foreign energy companies in the U.S. and has represented U.S. companies in Asia and Canada. Attorneys specializing in energy have negotiated ISO4 contract buy-outs and work with independent power producers and cogeneration facilities for alternative energy financing, as well as for licensing and permitting requirements at the federal, state, and local levels.

Hi-Z develops, manufactures, and sells commercial thermoelectric generating modules for converting heat into electricity. Currently, Hi-Zs modules are being used to generate electricity in a varied array of applications all over the world. The potential market for these modules is well over \$1 billion. Hi-Z modules are used for waste heat recovery from vehicles and furnaces. In addition, Hi-Z is developing thermoelectric generators for remote power applications that use oil, gas or nuclear isotopes as the heat sources. These applications run the gamut of power for cellular telephones, pellet stoves, heaters and portable appliances to powering transmitters in Micro Air Vehicles and Space Probes.

The firms principals are Charles and Peter Kuhn. They are certified energy auditors and professional mechanical engineers registered in California. Charles Kuhn has an M.S. in Industrial Engineering and Operations Research, UC Berkeley. Peter Kuhn has an M.S. in Mechanical Engineering, UC Berkeley.

Since 1980 Kuhn & Kuhn has participated in energy related projects at hundreds of public and private sector facilities. Project reviews are a specialty for Kuhn & Kuhn. The company provides independent reviews of conservation, cogeneration, and alternative energy technology projects at all stages of project development. Energy conservation projects include evaluation of lighting retrofits, heat recovery, motor controls, energy management systems, and chiller plant retrofits. In some cases Kuhn & Kuhn has identified measures costing less than \$30,000 which save over \$300,000 annually. Cogeneration projects in which Kuhn & Kuhn has participated include natural gas engines and combined cycle systems for diverse facilities. The companys involvement ranges from initial feasibility studies through design specifications to post-construction performance reviews. Renewable resource projects include a waste recycling plant with organic digesters, a 50 MW biomass facility, and solar heating systems. The primary goal of Kuhn & Kuhn is to dramatically reduce client energy costs while improving facility performance. The companys small size is an advantage in reaching that goal. It ensures active involvement of the principals while reducing overhead and turnaround time. When more personnel are required, the company relies on a broad array of specialists.

kW Engineering provides objective analysis of energy efficiency options for commercial and industrial businesses. Our core business is providing technical services that enable consumers to cost-effectively save energy and lower operating costs in their buildings. Our company principals and staff share a personal commitment to saving energy in buildings. We've formed the company to allow us to do the work that we love - namely finding ways to save energy and conducting analysis on building systems to accurately determine true costs and benefits. To accomplish this we rely on state-of-the-art measurement and verification tools, develop and improve calculation methods, stay informed with respect to the latest developments in energy efficiency, and contribute to innovation in our field.

The OorjaPac™ Model III is a liquid fuel cell that operates as an on-board battery charger for a wide variety of Class 3 vehicles in the material handling industry. The OorjaPac™ keeps the vehicle's battery at a constant state of charge eliminating the need for battery swapping and rapid charging. Refueling infrastructure is inexpensive and safe because the fuel is a common industrial liquid, methanol. The OorjaPac™ provides full gridindependence and reduces CO2 emissions by 30 to 66%.

Optimal Technologies provides next generation ?smart grid? power technologies that are applicable to both supply-side T&D grid systems and demand-side energy management and end-use systems. These products radically improve on present technology to provide true system-wide and local integration and optimization of electrical energy and related assets. Supply-side products are marketed under ?AEMPFAST? while energy management and end-user systems are marketed under ?SUREFAST?. AEMPFAST: T&D grid analysis, optimization, and management software and services. On average finds more than 10% of new efficiencies already existing within the system without new generation or wires.

SUREFAST: Residential and Commercial energy management, (and demand response), system with building and home automation and integrated, advanced services (VoIP, communications, security, asset management, etc.)

For over 20-years PROJECT DEVELOPMENT has served public and private clients as a Project Manager, as an Owner's Representative, and as a consultant in the development process. As a Project Manager we typically manage, on behalf of the client, a project's initial development activities that may include: 1) site selection and ground lease or purchase negotiations; 2) lead negotiations for the purchase or lease of a fuel supply; 3) prepare applications for use permits, air quality permits, environmental permits; 4) negotiate permit conditions; 5) appear at public hearings regarding permits and municipal issues; 6) negotiate power sales Agreements; 7) secure utility Agreements necessary for an interconnection, distribution and transmission; 8) prime mover selection and coordination; 9) identify and engage surveyors, geotechnical companies and supporting consultants; 10) assist in selecting construction contractors; 11) community relations during development and construction; 12) post construction permit compliance. The responsibilities of an Owner's Representative might include attending weekly project progress meetings with the engineers, consultants, and contractor to monitor contract compliance and the design and construction schedules. Often we chair this activity and record the minutes. With the architect, we review and certify construction completeness represented in the contractor's monthly pay application. In conjunction with the architect and consulting engineers, we review change order requests and make recommendations to the client regarding changes. Negotiating the cost of change orders is often our responsibility. When the client is a municipality, coordination of contractor activities with city departments (i.e. building and planning) can be part of our scope of work. As a renewable energy development consultant, we assist municipal jurisdictions in the process of selecting a developer to utilize a renewable energy resource. Evaluating resources and recommending options for development can be a part of our work. We write RFP's and manage the selection process, looking for a developer who would design, permit, own, and operate a renewable energy facility. Supporting contract negotiations is an essential part of our service.

Severson Company, Inc. was founded in 1981 and is located in Yucaipa, California. Our primary business is providing measurement systems and services. We have designed, built, and installed over 300 measurement systems. Many of these systems, as well as some built by others, are presently operated and maintained by Severson Company, Inc. The average data recovery rate from systems we have provided and continue to operate is greater than 99%.

Our engineering staff is experienced in designing accurate measurement systems and developing support software. Our engineers are ready to design a measurement system that will satisfy your requirement.

Management at Severson Company has established a policy of providing our customers with personal attention, rapid response, quality products & services, and continuing support. We want every customer to be totally satisfied.

Solatube International Inc. is the innovator of the tubular skylight, a revolutionary daylighting product for residential and commercial applications. A patented reflective system located inside a rooftop dome collects and redirects light down a highly reflective tube to a diffuser at ceiling. Solatubes Brighten Up Series includes 10- and 14-inch units, which are ideal for residential and smaller commercial spaces. The SolaMaster Series, featuring the flagship 21-inch unit was designed with large spaces in mind and offers a unique daylighting option for commercial buildings and larger areas of the home. Another Solatube energy-efficient product is Solar Star, a solar-powered attic fan.

Sun Frost primarily manufactures energy efficient refrigerators. An energy efficient Sun Frost refrigerator makes powering a home with photovoltaics or other low output energy sources both feasible and affordable. These units are available in AC power for cutting utility bills of DC power for alternative energy uses. The super efficient solar powered vaccine storage refrigerators are WHO approved and used in over 50 developing countries.

In addition, Sun Frost is currently developing energy efficient DC air conditioners for cooling sleeping area both in solar powered homes and long haul trucks.

Tetra Tech EM Inc. (Tetra Tech) is a large publicly owned business that provides specialized environmental and energy management services to government and commercial clients. A wide range of technical capabilities is available at 37 offices in the US and in strategic locations around the world. Tetra Tech brings an integrated view of energy generation, transmission, and end-uses to energy management. We focus on integrating the environmental and economic aspects of energy management to apply environmentally sound, performance-based technology and management solutions to reducing energy and water usage at public and private sector facilities. Tetra Tech has a range of contract venues available for both private and government clients. Services can be provided on a project basis or under master service agreements. Tetra Tech has approved California Multiple Award Schedules (CMAS) with the California Dept. of General Services to provide both environmental and energy management consulting services at state approved rates. The CMAS contract can be used by diverse government institutions such as State of California agencies, cities, counties, other local government bodies, and public education entities. Tetra Tech also has a venue for federal energy management and environmental contracts under two U.S. General Services Administration (GSA) Schedules.

Western Pacific Signal is presently the largest supplier of energy-saving LED traffic signal lamps to Caltrans, and the majority of all City and County agencies within California. WPS is the exclusive distributor of Leotek Electronics Corp. USA, an EPA registered "Energy Star" power partner. WPS has an open \$12 Million purchase order with the State of California, which any public agency can order from. In addition to LED signal lamps, WPS provides modern traffic signal control assemblies and controller upgrades to public agencies. We sell and install battery backup systems (BBS) for signal control cabinets, and network these devices into central control systems.

YEI Engineers, Inc. (YEI) has been providing electrical, mechanical and control engineering services since 1975. YEI's services include power generation, substations, electrical systems analysis, indoor/outdoor lighting, distribution, uninterruptible power supplies, fire alarm systems, water, gas, fire protection, plumbing, building/plant/site utilities and utilities relocations, energy management and energy conservation, instrumentation and control systems.

YEI is a Disadvantaged Business Enterprise (DBE) and a Small Minority Business Enterprise (SMBE) certified by the various agencies. YEI currently employs a staff of 20 professional engineers, designers, CAD operators and administrative personnel. Over seventy-five percent of our engineers are registered in electrical or mechanical engineering, some with multiple registrations in various states.

Electrical system design projects:-

High, medium and low voltage electrical systems, power distribution and transmission, power generation and cogeneration, standby and emergency power systems. We also provide the design for interior/exterior lighting, utility rehabilitation and retrofits, grounding, communication, security and fire alarm systems for a wide variety of facilities, utility roadway relocations and seismic upgrade utility relocations.

Mechanical system design projects:-

Heating, ventilation and air conditioning, plumbing, fire protection, heavy industrial utilities systems including compressed air system, high and low pressure steam, heating and cooling water systems, fuel supply systems including oil and gas. Also included are water treatment plant system, wastewater plant system, pumping stations, reservoirs, plumbing drainage systems, heat exchangers, central refrigeration systems, cooling towers, commercial and industrial boilers and power cogeneration requiring both mechanical and electrical systems. Seismic design projects include occupied building seismic upgrade, pier seismic upgrades and utility relocations.

Control system projects:-

Control and instrumentation, both pneumatic and

electronic, for processes, building services, remote monitoring, energy management control systems, distributed control systems for industrial processes and fire detection systems. YEI's design of substations and switching stations include Supervisory Control and Data Acquisition Systems (SCADA) for electrical distribution system control and automation, and other process system control and automation.
